

OpenCollab - C4 Level 1 System Context

Sends prompts, tool schemas, and conversation state; receives completions and tool calls
[HTTPS]

Reads files, writes patches, searches code, and executes commands
[Filesystem / shell]

Discovers and invokes optional external tools
[stdio JSON-RPC]

Runs benchmark tasks in isolated containers
[Docker CLI / API]

LLM Provider APIs

OpenAI, Anthropic, and OpenAI-compatible model providers.

Git Workspace / Repository

Local repository, worktree, or mounted benchmark project that agents inspect and modify.

MCP Servers

Optional Model Context Protocol servers that expose dynamic external tools over stdio JSON-RPC.

Docker / SWE-bench Environment

Optional benchmark containers and Docker-based SWE-bench runner.
